PROFESSIONAL SUMMARY

Frontend-focused Full Stack Developer with 3.6 years of experience delivering enterprise-scale cloud dashboards and AI-powered platforms. Specialized in Next.js, React, TypeScript, and Node.js with proven performance optimization skills, including 40-60% reduction in load times and improved rendering efficiency across high-traffic dashboards. Recently contributed to production-grade infrastructure UI at OLA Krutrim and engineered RAG-based AI analytics systems.

TECHNICAL SKILLS

Frontend: Next.js, React, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, Zustand, Context API, Redux Toolkit
Backend: Node.js, Express.js, Python, REST API Design, MVC Architecture, API Orchestration
AI and Systems: RAG Architecture, Vector Embeddings, OpenAI APIs, Qdrant, Semantic Search
Database: PostgreSQL, MySQL, MongoDB, Query Optimization, Caching Strategies, Redis
Performance: Code Splitting, Lazy Loading, Memoization, Virtual Scrolling, Debouncing, Async Processing
Deployment and Tools: Vercel, Render, NeonDB, Railway, Git, GitHub, Agile/Scrum, Docker

PROFESSIONAL EXPERIENCE

Software Developer - Full Stack and AI Systems

CODOT Technology | Nov 2025 - Apr 2026

- Built AI chatbot systems using OpenAI APIs and Qdrant vector database, enabling natural language querying over unstructured business data for 3 enterprise clients via RAG pipeline and vector embeddings
- Designed Node.js and Express backend with modular MVC architecture handling data ingestion, transformation, and API orchestration for high-volume analytics workflows, using Redis for caching
- Developed performance-optimized Next.js dashboards with lazy loading, memoization, and virtual scrolling, improving rendering speed by 30% on large datasets
- Implemented async processing and request batching to reduce API latency by 40% under high data-volume scenarios

Frontend Developer (Contract) - OLA Krutrim Cloud

CODOT Technology (Client: OLA Krutrim) | Aug 2024 - Nov 2025

- Architected enterprise-scale cloud infrastructure dashboards for managing virtual machines, storage systems, and load balancers used by thousands of cloud users
- Built reusable Next.js component library of 40+ components, reducing new feature development time by 30% across cloud modules
- Optimized dashboard performance via code splitting, dynamic imports, and React.memo, achieving 50% faster initial load and smooth real-time data updates
- Integrated frontend with REST APIs for real-time monitoring and control of cloud resources, handling complex state management with Redux Toolkit and Zustand
- Ensured cross-browser compatibility and mobile responsiveness across all cloud management modules in a high-scale production environment

Frontend Developer

Equinox Tech Solutions | Oct 2022 - Jul 2024

- Developed and scaled an EdTech platform serving 5,000+ active students, improving content delivery speed by 20% through component-level performance optimization
- Built interactive, performance-optimized UI components for course consumption workflows using React and JavaScript (ES6+), reducing re-renders by 25% via memoization
- Integrated REST APIs and managed dynamic data rendering across 10+ learning modules, improving data load efficiency with pagination and debounced API calls
- Enhanced cross-device responsiveness using Tailwind CSS, improving mobile engagement by 20% based on user analytics
- Collaborated in Agile/Scrum sprints, consistently delivering features on schedule across 3 product iterations

KEY PROJECTS

WashHub - Multi-Vendor Car Wash Marketplace Platform

Live: <https://wash-hub-frontend.vercel.app/>

- Built a production-deployed full-stack marketplace with three user roles (customer, vendor, superadmin), covering end-to-end booking, real Razorpay payments (UPI and card), and AI features
- Engineered a concurrency-safe booking engine using PostgreSQL transactions with FOR UPDATE row-locking, preventing double-booking under simultaneous requests
- Implemented geo-based discovery via the Haversine formula in a PostgreSQL raw query, sorting centers by distance with no paid map APIs
- Designed webhook-first Razorpay payment confirmation with server-side signature verification, never trusting frontend callbacks
- Built a two-layer caching strategy (Redis and React Query) and mapped SSR, ISR, and CSR rendering to each page's needs for SEO and performance
- Integrated GPT-4o-mini for smart search, personalized recommendations, weekly vendor insights, and review sentiment tagging
- Stack: Next.js 14, TypeScript, Node.js, Express, Prisma, PostgreSQL, Redis, Zustand, React Query, Razorpay, OpenAI, Leaflet.js. Deployed on Vercel (frontend), Render (backend), and NeonDB (PostgreSQL database)

EDUCATION

Bachelor of Engineering - Civil Engineering

2014 - 2018

Transitioned to software development through self-learning and professional practice since 2022. Continuously upskilled in modern web frameworks, cloud deployment, and AI/ML systems.

ADDITIONAL HIGHLIGHTS

- Performance optimization specialist: code splitting, lazy loading, memoization, virtual scrolling, caching, and debouncing across React and Next.js applications
- Hands-on production experience with RAG architecture, vector search (Qdrant), and OpenAI API integration for enterprise AI systems
- Contributed to OLA Krutrim, a high-scale AI cloud platform, delivering enterprise frontend systems in a fast-paced product environment
- Comfortable with full delivery lifecycle: system design, development, performance tuning, and cloud deployment (Vercel, Render, NeonDB, Railway)
- Familiar with Git, GitHub workflows, REST API design, and Agile development practices
